Profile

A person with a divergent thinking attitude who is working on future generation projects in Artificial Intelligence and python . Seeking for a job where I can implement my theoretical knowledge and skills towards both for the organization and my own self.

Skills

Skills	Python . Data Analysis . Machine Learning . Statistics. SQL . Web Scraping. Basic c++. Html. CSS. PowerBI . Tableau.
Platforms	Windows . Linux

Personal Project

Flat Recommendation System

- Developed personalized project aimed at recommending flats to users based on their preferences such as budget, location, and size on the basis of 2023 data of particular city of 99 acres.
- System uses web scraping , python and machine learning algorithms to suggest relevant flats listings tailored to individual needs.

Email Spammer classifier

- Developed a project to identify spam messages and filter them out from emails.
- This classifier uses natural language processing (NLP) and machine learning algorithms to detect spam emails based on patterns, keywords, and statistical features commonly found in spam.

Netflix Data Analysis Dashboard

- Netflix Data Analysis Dashboard is a data visualization project created using Tableau to explore and analyze trends within Netflix's extensive content library.
- Examining factors like genre distribution, release patterns, and regional availability, this dashboard provides insights into Netflix’s content strategy and audience engagement over time.
- Link- Netflix by ritik | Tableau Public
